Handling short instructions for

ProfiNet-WATCHDOG

power supply:

If you want to use the device you have to supply power to it first.

The device can either be powered with 5V via the USB connector *(only for desktop case)* or with 24V via the included phoenix connector *(attention: polarity must be respected)*.

access to the web interface:

After you have supplied power to your device you have the ability to access the web interface of the device.

The ProfiNet-WATCHDOG provides an own WLAN network via it's integrated WLAN interface. The WLAN network has the name "ProfiNet-WATCHDOG WiFi". This network is not encrypted, so you can connect to it easily without entering a password or something else.

If you are connected with the WLAN network of the ProfiNet-WATCHDOG your computer or smart phone get's an IP address automatically via DHCP. If your computer / smart phone is not configured for DHCP you can either configure your network card to use an IP address between 192.168.1.2 and 192.168.1.254 or activate DHCP on it.

If your computer doesn't have a WLAN interface or if you don't want to use it you can still access the ProfiNet-WATCHDOG through the optionally available "Ethernet over USB" adapter. If you have brought the adapter already, you only have to connect it to the USB socket of the device. On the LAN interface of the adapter a DHCP server is also running by default. If your PC is not configured for DHCP you can either configure your network card to use an IP address between 192.168.0.2 and 192.168.0.254 or activate DHCP on it.

Now you can open an internet browser (e. g. Mozilla Firefox) and enter the IP address 192.168.1.1 (for WLAN) or 192.168.0.1 (for USB-LAN) in the address line. Next you should see the web interface of the ProfiNet-WATCHDOG device with a hint window and an input field *(see picture on the right side)*. On this page you have to enter the serial number of the device, which can be found on the bottom or right side of the device.

	function release
	onfirm the identity of the device please enter the serial number of the device. The serial ser can be found on the bottom side of the device.
prot set a The	se note that the WLAN network from your device is open and no encryption or password clien consists. Everyone can connect and access your data and networks. We recommend to WLAN passwork and encryption (or g. WHSQ) after the device untocking. configuration of the device can be changed without any password by delaut. On the guildon page you can specify a password.
	the serial number was entered and accepted, you will be redirected to the configuration page is page you can change all parameters of the device.
	serial number:

system	
device type: ProfiNet-WATCHDOG formance version: 1.07	
filmware version: 1.07	
- access protection	
current config password:

Analyzing the ProfiNet network:

The ProfiNet-WATCHDOG has the ability to analyze the network traffic on the connected ProfiNet. First you have to connect the ProfiNet master PLC with a LAN cable to the interface "Master-SPS" of the ProfiNet-WATCHDOG. Next you can connect the other ProfiNet subscribers with another cable to the interface "Slaves". Now your ProfiNet is lead through the ProfiNet-WATCHDOG without affecting the real time behavior.

For analyzing and monitoring the ProfiNet network you have the menu item "overview" on the web interface of the device.

An detailed description as well as an explanation of the single web pages can be found in the manual of this device. The user manual can be found on the product page of our web page under the download section *Documentation* \rightarrow *Handbook ProfiNet-WATCHDOG*.

Please make sure to update your drivers before using our products.

Sie müssen mit mehreren SPS-Steuerungen arbeiten, haben aber keine Lust sich dauernd ab- und anzustecken? Kein Problem, Sie schließen ein Gerät der AG-Switch-Serie an den SPS-Steuerungen sowie Ihren PC/PC an und schon können Sie mit den Steuerungen kommunizieren. Die Auswahl des entsprechenden Teilnehmers führen Sie beim AG-Switch-I mittels Kippschalter und beim AG-Switch-II per 24V-Steuereingang durch.

You need a continuous measurement of the concentration of oxygen without any configuration of the device or a switch of range of measurement? No problem, with the OSC-II-devices you are right. It shows you the concentration from % down to E -24 without any action from you. It switches automatically the ragne of measurement.
